Notes: These designs can be scaled up or down to your preference. We found that 2" x 3" is a good size to start with, 3" x 5" is also good.

We used Spectrum Silver Coat and Kokomo Opalescent glass. The bottom piece can be mirror or anything you happen to have. Since the sides are joined by the edges the overall width will be wider by the thickness of the glass being used on the sides. We used 14 gauge wire to help round out the corners. Single piece sides are the easiest, but we included some decorative side designs if you are more experienced. Remember that all mirror backed glass needs to be sprayed with edge protector for good results, remember to let it dry one whole day before grinding.
